

Technology Unveiling

Synodon Inc. invites you to participate in the showcasing of the breakthrough **real sens** remote gas sensing technology. The events will be hosted by TEC Edmonton and Calgary Technologies Inc.

real sens is a spinoff from a Canadian Space Agency program and has received \$3.1 million in public funding support from AVAC Ltd., Sustainable Development Technologies Canada and Natural Resources Canada.

Over the next few months, **real sens** has been scheduled to complete a number of novel projects:

- survey methane seeps from the Mackenzie Delta hydrate deposits in a joint project with Geologic Survey of Canada
- assess the methane emissions from landfill and wastewater facilities
- report on leaks and emissions from natural gas handling facilities of a number of different operators.

Formal remarks in the first half hour will be followed by an open house. Interviews and photo opportunities will be available with all speakers. Further details about upcoming projects will be available in the conference materials.

August 5, 2009
9:30AM - 2:00PM
TEC Centre
4th Floor Enterprize Square
10230 Jasper Ave.
Edmonton, AB

August 6, 2009
2:00PM - 6:00PM
Alastair Ross Technology Centre
3553 - 31 Street NW
Calgary, AB
